

The Carousel Filing System is a compact microfilm storage file which offers rapid access to large amounts of data. It can be expanded quickly and easily at low cost. The high impact polystyrene construction assures easy, fatigue-free rotation.

Easily accessible

The carousel system is designed for quick storage and retrieval of data. A small carousel can be located on top of a desk. A number of large files, holding 600 microfilm cartridges each, can be located next to a microfilm work station, allowing easy access to over 4,000 cartridges containing millions of documents. Work station clusters can be established to allow several operators access to a single file bank.

Highly versatile

Although most commonly used for storing 16mm microfilm (in boxes, magazines and standard cartridges), the system will also accommodate data cassettes, punched paper tape, NC tapes, MTST cartridges and various audio-visual materials (8mm film loops, 8-track audio tapes, audio cassettes and some TV tape cassettes). Labelling space is provided on each carousel for ready identification of each section and unit of stored material.

Grows with your expanding needs

The carousel system is modular based on an expansion pack with 60 units of capacity. The minimum carousel includes an expansion pack, a top and a bottom. The bottom is a turntable that allows free rotation of the entire unit. The file can be expanded at any time by simply removing the top, placing one or more additional 60-unit expansion packs on the existing stack and replacing the top.

Easily affordable

Carousels are competitively priced with alternative storage and retrieval systems. More importantly, the system's accessibility allows for very efficient use of stored materials. High-density storage requires less floor space and better utilization of existing facilities. Finally, current expenditures can be kept low as the system's capacity can be easily expanded as requirements grow.

Specifications

Complete Carousels

100 Series

The 100 Series is designed to accommodate units that fit its 4 $\frac{1}{4}$ " wide x 1" high x 3" deep compartments. Most 16mm microfilm, MTST cartridges, data cassettes and audio cassettes fit this series. Available in grey, these units are 17 $\frac{3}{8}$ " square. To facilitate ordering, the last digits of the product number represent the capacity. **As shown, complete carousels include a top, bottom and expansion packs.** The model 100-600 also includes a flat base.

Components

Expansion packs Each expansion pack has a 60 unit capacity. See above descriptions for available colour, size and suggested configurations. Expansion packs are moulded high impact polystyrene. Carousels should not be assembled to a height greater than 64".

Top/Bottom Tops and bottoms are white and are included when ordering a complete carousel. The bottom is a turntable that allows free rotation of the entire unit.

Bases A base is recommended if placement is on a carpeted floor. The 120-1 cube base is 17" square and has a convenient storage shelf. The 115 flat base is 18" square. Both bases are grey steel construction with 4 full-swivel castors. The 115 flat base is included with 100-600 and the 103-360 carousels. Both bases can be used with either series.

Hook A hook is available to assist in moving carousels and may be used with either base.
